

leeways

bespoke packaging solutions

Welcome To Leeways

Established in 1971, Leeways has grown to become one of the leading suppliers of thermoformed packaging solutions in the UK.

Our family owned business is committed to providing the highest quality product and unrivalled service, offering real values that not only meet, but exceed our customers' expectations.

We pride ourselves on our competitiveness, manufacturing principles and the investment made in putting together one of the most experienced teams in the thermoforming industry.

Our aim is always to go one step further, looking at how new designs, materials and processes can help to achieve even better results, whilst meeting all of your technical requirements.

We build a complete commercial and technical partnership with customers so that Leeways becomes your preferred supplier for thermoformed plastic packaging. With over 130 years of combined knowledge in the packaging industry, our team of highly experienced technical managers are able to offer support and advice to our customers on every aspect of your order.

The incomparable level of flexibility and loyalty we offer to our customers makes us the natural supplier choice for many food and non-food manufacturers.

What's important to us

Sustainable Packaging

Together with our customers, we believe it's important to preserve natural resources for future generations. Our aim is to use technology and solutions that limit harm to the environment and take every opportunity to recycle waste material.

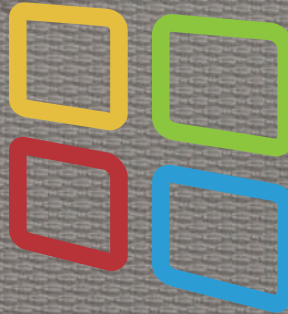

Considering the complete life cycle from raw material to disposal we:

- Source UK products wherever possible and minimise consumption of raw materials and utilities.
- Aim to develop products that can utilise the smallest footprint and lowest weight possible.
- Encourage customers, employees, suppliers and sub-contractors to be environmentally aware.
- Aim to be waste free

With the use of rPET, we are able to provide responsible packaging. rPET is recycled PET (PolyEthylene Terephthalate) material, which is sourced from post-consumer waste, mainly drinks bottles. Using reasonable endeavours, we aim to use rPET, with a minimum of 50% post-consumer waste.

rPet is now widely used and recognised throughout the food packaging industry and has many qualities:

- It's recyclable and sustainable with a growing supply of raw material.
- It's an environmentally responsible packaging material. Technology is constantly improving.
- It's recognised by leading foodservices, retail & FMCG brands.
- It produces high quality packaging with an excellent finish at competitive prices.

Design & Innovation

Design and Prototyping

Our extensive Product Development & Design Studio enables Leeways to provide in-house tooling and samples. This has proved a great success and has rapidly grown giving us the ability to design sample moulds and patterns at a new and enhanced level.

Leeways provides its customers with the very best facilities and support, including:

*Rapid Prototyping & Packaging Design
Tool Build
Materials Development
Technical Support*

Close integration between sales, design and our toolmakers allows us to develop the ultimate pack design, therefore providing rapid turnaround times for production quality prototypes and samples for pre-production transit trials. Whilst meeting your technical requirements we also go a step further, looking at how new designs, materials and processes can help you to achieve even better results.

Having our own in-house design team brings us to the forefront of design innovation with the use of the latest 3D modelling software to keep us and our customers at the peak of packaging design. Our designers aim for results that not only look good to the end user but also create intelligent and efficient solutions to enable faster packing and heat sealing, reduced pack weight and cost.

It's the origination of innovative new designs that keeps us and our customers at the leading edge of packaging development, offering efficient solutions for better productivity on our customers processing lines.

Our technology and experienced designers means we can create rendered photo quality drawings that save time and money rather than going straight to prototype. We can then produce and modify prototypes rapidly which is especially important given the ever shrinking deadlines when launching new products.

Facilities

Our excellent on-site facilities support all our needs to ensure that we provide the best solutions to our customers.

With facilities that total over 145,000 square foot including our state of the art manufacturing unit, warehousing and distribution centre. All based in the heart of Gloucestershire, providing us with excellent road links to anywhere in the UK.

Tooling

Our wide range of machinery enables us to offer various options for tooling. With smaller machines ideal for lesser volumes such as product launches, right through to fully functional high specification tools for larger volume work.

This allows us to tailor our customers' needs to the correct tooling and unit price required for their project budgets. In-mould cut tooling for medium to high volume production runs is also available, where cut size tolerances are critical for high speed packing.

Tool build

Once we have received approval of our CAD designs and prototypes we move to the full tool build which takes approximately 3-4 weeks.

Your Account Manager will work closely with the Planning Team and Tooling Department, to schedule a delivery that meets your expectations and ensure that launch dates are achieved.

Manufacturing

Leeways are continually investing in the latest equipment available to the thermoforming industry. The combination of large and small thermoforming machines allows us to produce low to high volume runs.

All manufacturing takes place in our High Care Manufacturing Plant, which provides validation and ensures full compliance of all critical systems, facilities and environments with 100% in line metal detection for all products prior to packing.

Our accreditation to BRC/ IoP Global Standard for Packaging and Packaging Materials demonstrates that Leeways is competent in maintaining product safety and integrity.

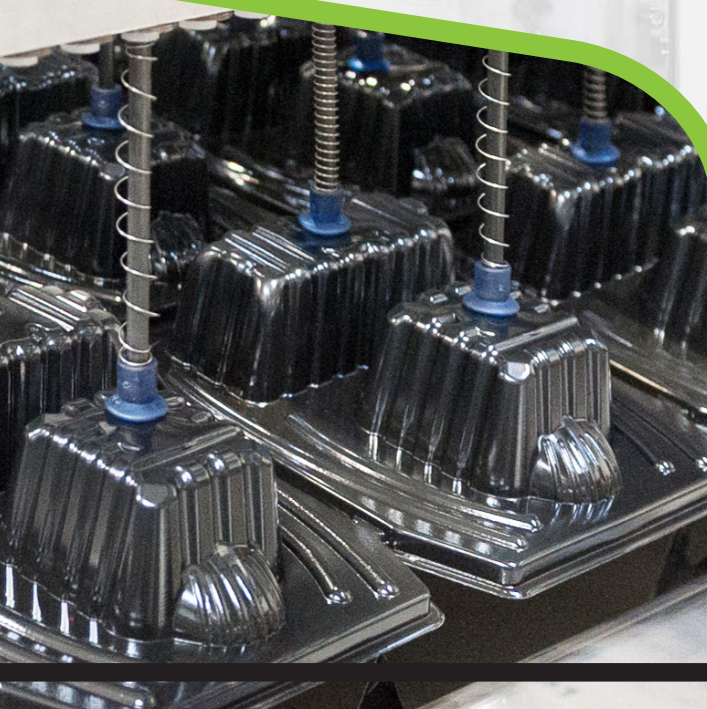

Warehousing

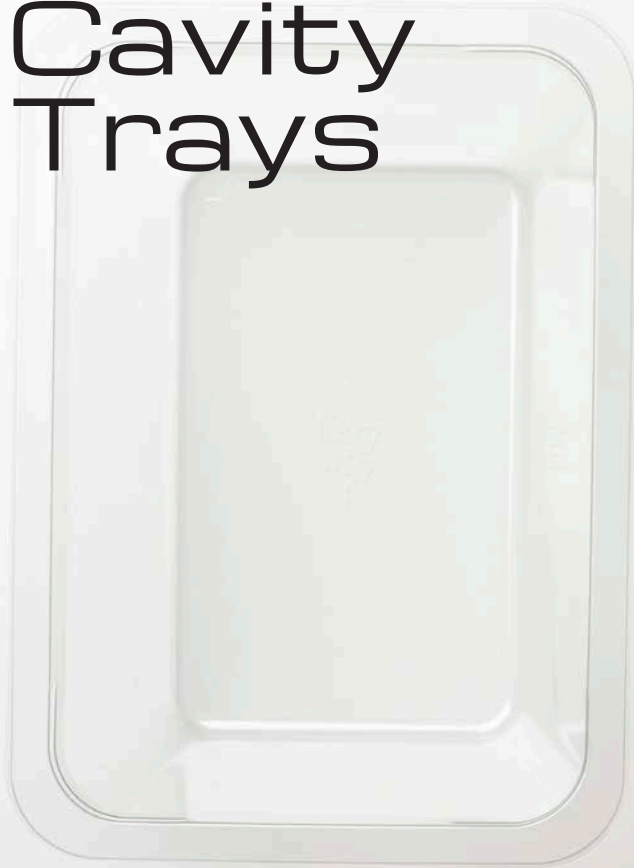

Our specialist distribution centre totals 90,000 square feet of fully racked space and has the ability to hold over 8,000 pallets.

This facility allows us to deliver a wide range of products and provide a faster, more efficient service to our customers via well organised receipt of goods, palletisation, order receipt, pack and order assembly and delivery to the end user.

All stages of the process are completely traceable via our computerised stock management system.
